1. Use-Cases

Identify three main use cases of the system, describe them using the following template:

Use Case: 1	Create a Post	
Level	Primary Task	
Preconditions	User is authenticated and not currently suspended	
Primary Actor	Regular User	
Priority	High	
Frequency	High	
Main Success Scenario	Step	Action
	Step 1	User selects the "Create Post" option.
	Step 2	User enters the title, body text, and relevant tags.
	Step 3	User submits the post.
	Step 4	System displays the newly created post to the community.
Extensions	Step	Branching Action
	Step 2a	User leaves required fields empty: System notifies for missing info.

Use Case: 2	Suspend a User
Level	Primary Task

Preconditions	The Moderator is authenticated and has probable cause to suspend a regular user.	
Primary Actor	Moderator	
Priority	High	
Frequency	As needed	
Main Success Scenario	Step	Action
	Step 1	Moderator selects the “Suspend” option next to the user’s name.
	Step 2	Moderator fills in the cause and the evidence.
	Step 3	System restricts the given user from posting for a specified time.
Extensions	Step	Branching Action
	Step 1a	Power abuse (reports from users) will lead to losing the role.
	Step 2a	Moderators can’t suspend other moderators.
Use Case: 3	Approve Flagged Posts	
Level	Primary Task	
Preconditions	The Moderator is authenticated and one post has been flagged by the system or a user for review.	
Primary Actor	Moderator	
Priority	High	
Frequency	As needed	

Main Success Scenario	Step	Action
	Step 1	Moderator selects from the main view a highlighted flagged post to review its contents.
	Step 2	Moderator determines the post does not violate community guidelines and is appropriate for the forum.
	Step 3	Moderator selects the "Approve" action.
	Step 4	The system removes the "Flagged" status from the post in the database.
Extensions	Step	Branching Action
	Step 3a	Moderator determines the post is inappropriate: chooses to "Delete" the post instead.
	Step 3b	Moderator determines only the tags are incorrect: chooses to "Edit Tags/Categories".
