1. Introduction
2. Definitions

1. Introduction

This Glossary serves as the central repository for all terminology, acronyms, and data definitions specific to the **Mini-StackOverflow** project. This document ensures that developers, stakeholders, and users have a unified understanding of the system's core concepts.

2. Definitions

Term	Definition	Expansion
Term 1	Clear, concise definition of the concept.	Optional clarification or example.
JSON	A lightweight, text-based, language-independent data format used for the structured export of moderator activity logs.	JavaScript Object Notation
Data Persistence	The characteristic of state that outlives the process that created it, achieved here by storing all forum data in a centralized database.	
Client-Server Architecture	A distributed application structure that partitions tasks or workloads between the providers of a resource or service (server) and service requesters (client).	
CRUD	The four basic functions of persistent storage implemented through user actions such as creating questions (Create), searching (Read), editing own posts (Update), and deleting inappropriate content (Delete).	Create, Read, Update, Delete
Search Indexing	The mechanism used by the system to organize information to allow for the rapid retrieval of questions during a user search.
